PROFILE

An engineer with a strong problem-solving mindset, blending experience across frontend architecture, business system automation, and enterprise workflow optimization. Over the past two years, I've worked on building scalable systems, integrating operational platforms, and improving business processes through automation and structured system design.

My experience across CRM platforms, frontend technologies, and system integrations has strengthened my ability to translate complex business workflows into practical technical solutions. I'm passionate about building efficient, user-focused systems that balance usability, scalability, and long-term adaptability.

PROFESSIONAL EXPERIENCE

Zoho Engineer & System Architect

11/2023 – 05/2024

- Led architecture of integrated systems combining WordPress and Zoho platforms to improve operational efficiency.
- Built and deployed custom automations using Zoho CRM, Flow, and Creator tailored to client workflows.
- Engaged directly with clients, delivering solutions and translating business logic into actionable engineering outcomes.
- Recognized as the go-to engineer for system-level decisions and long-term impact planning.

Software Engineer

05/2024 – 07/2025

- Worked on business process automation and operational workflow improvements using CRM-based systems and enterprise tools.
- Collaborated with teams to customize workflows, improve system responsiveness, and streamline internal communication processes.
- Integrated APIs and automation logic to support scalable business operations and efficient data handling.
- Contributed to system optimization, troubleshooting, and implementation of solutions aligned with business and operational requirements.

Geospatial Systems Engineer

08/2025

- Driving innovation in geospatial intelligence, I specialize in enhancing and supervising coordinate systems that redefine national mapping precision.
- Focused on developing my country's first homegrown coordinate system—designed for accuracy, resilience, and modernization of spatial data frameworks.
- I bridge GPS technology with evolving geographic realities, ensuring seamless correlations between global systems and local needs.
- Passionate about transforming geospatial challenges into scalable, data-driven solutions that empower smarter planning and sustainable development.

EDUCATION

Bachelors in Computer Science

Government College University Faisalabad

2019 – 2023

Faisalabad, Pakistan

SKILLS

Databases: MySQL, MongoDB (Basic)	Basics OOP, Data Structures & Algorithms
Frontend Technologies React.js, Vue.js, Next.js, Nuxt.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Sass, jQuery, Python, Numpy	Backend Nodejs, Express, Deluge
State Management Redux, Context API, Vuex, Pinia	Microsoft Dynamics 365 CRM Systems, REST APIs, Power Platform (Basic), AutomationCRM, CustomizationWorkflow, AutomationSystem Integration
Build & Deployment Vite, Webpack, Babel, Git, GitHub Actions, Netlify, Vercel	UI/UX & Tools Figma to Code, Responsive Design, Material UI, Chakra UI, Headless UI, Framer Motion
CMS & Page Builders WordPress, Elementor, WPBakery, Gutenberg	Automation Flow automaton, Saas AI automation
APIs & Integration REST APIs, Webhooks, Axios
